

Tubular and Process Assemblies

WATROD Heating Elements

Single- and Double-Ended Elements

Available in single- or double-ended termination styles, the versatile and economical WATROD tubular heating element lends itself to virtually the entire range of immersion and air heating applications.

The single-ended WATROD tubular design has both terminals at one end. The opposite end is sealed. Standard 12-inch (305 mm) flexible lead wires are crimp connected to the terminal pin and have silicone-impregnated fiberglass oversleeves.

The double-ended WATROD, with its round cross-sectional geometry, is highly adaptable for bending—especially when bending is performed in the field.

Watlow's new double-sided multicoil tubular elements offer various combinations of resistor coils and thermocouples inside one sheath. They have the ability to sense the heater's internal temperature accurately every time, or offer three-phase capability in one element. Both single- and double-ended WATRODs share many construction features that deliver long life—the resistance wire is centered in the heater sheath and electrically insulated with compacted, high-grade magnesium oxide for superior heating performance.

WATROD heating elements have a variety of mounting and termination options that make them highly popular among industrial customers.

Single-Ended WATROD Performance Capabilities

- Watt densities to 45 W/in² (6.9 W/cm²)
- UL® and CSA component recognition to 240V~(ac)
- Incoloy® and stainless steel sheath temperatures to 1200°F (650°C)

Double-Ended WATROD Performance Capabilities

- Watt densities up to 120 W/in² (18.6 W/cm²)

UL® is a registered trademark of Underwriter's Laboratories, Inc.

- UL® and CSA component recognition to 480 and 600V~(ac) respectively
- Inconel® sheath temperatures to 1800°F (982°C)
- Incoloy® sheath temperatures to 1600°F (870°C)
- Stainless steel sheath temperatures to 1200°F (650°C)
- Steel sheath temperatures to 750°F (400°C)
- Copper sheath temperatures to 350°F (175°C)
- Inconel® 600 sheath temperatures to 1800°F (982°C)

Features and Benefits

- **Precision wound nickel-chromium resistance wire** distributes heat evenly to the sheath for optimum heater performance.
- **Silicone resin seals** protect against moisture contamination and are rated to 390°F (200°C).

- **MgO insulation filled sheath** maximizes dielectric strength, heat transfer and life.
- **Standard sheath materials include:** copper, steel, 316 stainless steel and Incoloy®. Optional materials, available on made-to-order, include 304 stainless steel, Inconel® Monel® and titanium.
- **36 standard bend formations** allow forming the heating element to the application. Spirals, compound bends and multi-axis and multi-plane configurations.
- **Resistance wire fusion welded to the terminal pin** for a stronger, positive electrical connection.
- **Stainless steel studs** are fusion welded to terminal pins for mechanical strength with ceramic insulators.
- **Popular termination, mounting and moisture seal options available.**

Incoloy®, Inconel® and Monel® are registered trademarks of Special Metals Corporation.

Tubular and Process Assemblies

WATROD Heating Elements

High Temperature Tubular Double-Ended Elements

Watlow manufactures high temperature tubular heaters to bridge the gap between standard tubular heaters and Watlow multicell heaters. This new tubular is well suited for process air heating applications in excess of 1300°F (704°C), resulting in a maximum sheath temperature of 1800°F (983°C). Controlled lab testing between the new design and

current tubular designs show an increase in life of approximately 50 percent.

The high temperature tubular consists of an engineered tubing with an outer sheath of Inconel® 600 and a special internal construction. The outer sheath offers high temperature capabilities, reduced oxidation, as well as corrosion resistance.

The new tubular offering is available in 0.430 and 0.375 inch diameters that are configurable either as formed tubulars or process heaters. The heaters can also be welded to flanges and plates for mounting purposes. Maximum sheath length available is 275 inches for the 0.430 inch and 0.375 inch diameters. The factory should be contacted for longer sheath lengths.

Features and Benefits

- **Inconel® 600 sheath material and a special internal construction** assures high temperature performance and corrosion protection in tough applications.

- **0.375 in and 0.430 in diameters** allow heater to be configured to existing tubular designs that may be experiencing short life.
- **Dual-ended termination** can be installed into flanges and screw plugs similarly to standard product configurations.
- **Bendable in standard formations** makes the heater easy to apply in a wide variety of applications.

Applications

- High temperature ovens and furnaces
- Radiant heating
- Drying
- Environmental—VOC abatement
- Process air heating: duct heaters, circulation heaters
- Vacuum applications
- Flue gas cleaning (desulphurization)
- Fluidized beds

Sheath Temperature Versus Oven Temperature at Various Watt Density

This chart is used to verify the correct watt density for an oven application assuming no air flow. To use the chart, first select the oven process temperature on the X axis, using the chosen watt density read the sheath temperature rise above oven temperature from the Y axis. This number should then be added to oven temperature. If this number is greater than 1800°F (982°C), a lower watt density should be chosen.

Heater Life Estimate Service

High Temperature Heater Comparisons

*Assuming normal design practices.

Watlow now provides an industry first service with the offering of the high temperature tubular. By providing operating parameters Watlow can provide customers with the estimated life of the heater. To get this information the following information should be provided:

- Heater voltage
- Heater wattage
- Heater diameter (0.430 in or 0.375 in)
- Heated length
- Bend configuration and dimensions (# of bends and radius)
- Application including process temperature
- Power switching device and cycle time (SCR, etc.)

WATROD

F.O.B.: Hannibal, Missouri

How to Order

To order please specify:

- Volts
- Watts
- Heater diameter (0.430 in or 0.375 in)
- Termination type or style (studs, lead wire)
- Heated length
- Cold end length
- Overall sheath length
- Formation
- Mounting option (bulkheads, brackets, etc.)

Tubular and Process Assemblies

WATROD Heating Elements

Multicoil Single- or Double-Ended Elements

Watlow's new tubular element with multiple coils and/or thermocouples inside one sheath answers the need for a versatile, innovative tubular heater. Our new, patent-pending method of packaging a thermocouple inside of a heater with one or more resistance coils, gives the ability to sense a heaters' internal temperature accurately, every time.

Moreover, this is the first tubular heater in the industry with three-phase capability. The three coil, three-phase heater will offer a lower amperage solution while delivering the full power required in a compact heater package.

Previously three separate heaters would have been required to do the same job; therefore Watlow's new multicoil heater capabilities save money.

Watlow has the capability to put up to two coils in a 0.375 or 0.430 diameter heater and up to three coils in a 0.475 or 0.490 diameter heater. Any one or more of these coils can be a resistance wire or a thermocouple. The bending formations are virtually limitless; while mounting options are similar to other Watlow tubular heaters. The three-phase multicoil heaters can be single ended with three leads for three-phase wye hook up. Watlow recommends using an epoxy moisture seal or silicone-based seal.

Watlow's multicoil heaters are available in all standard materials such as Incoloy®, 304 and 316 stainless steel, and can be formed into almost any configuration. Our five thermocouple and/or coil options for multicoil tubular configurations will meet most requirements; however, we are always interested in discussing the use of different materials or changing the number of coils and thermocouples.

Features and Benefits

- **Three-phase capability** results in one element versus three, lower amperage, reduced installation time and lower overall cost.
- **Internal thermocouple** allows responsive and accurate, internal, high-limit sensing and reduced assembly costs.
- **Single ended** allows for mounting in a ½ inch NPT or ¾ inch NPT fitting with three-phase capability.
- **Multiple coil options** reduce inventory by allowing dual voltage capability.
- **Versatile forming capabilities** can be formed into virtually any configuration.
- **Internal construction** allows space savings because drilling and tapping of flange is unnecessary; plus, the interior thermocouple eliminates contamination buildup around the external sensing tip, reducing the possibility of false readings.

Applications

- Foodservice
- Process
- Medical
- Milled groove
- Plastics
- Plating
- Oven heating
- Semiconductor

Tubular and Process Assemblies

WATROD Heating Elements

Multicoil Single- or Double-Ended Elements

Continued

Options

Option A

3-phase tubular, 0.475 and 0.490 inch diameter.

Option C

1-phase tubular with one resistance wire and two thermocouples, 0.475 and 0.490 inch diameter.

Option E

1-phase tubular with two resistance coils, 0.375, 0.430, 0.475 and 0.490 inch diameter.

Option B

1-phase tubular with two resistance wires and one thermocouple, 0.475 and 0.490 inch diameter.

Option D

1-phase tubular with three different one phase circuits, 0.475 and 0.490 inch diameter.

Option F

1-phase tubular with one resistance coil and one thermocouple, 0.375, 0.430, 0.475 and 0.490 inch diameter.

Specifications

Termination style is currently limited to lead wires 392°F (200°C) Sil-A-Blend™ or 482°F (250°C) GGS.

Moisture seals are required, options include:

- Standard epoxy with temperature rating to 266°F (130°C). Typical applications include water/oil immersion.
- Lavacone with temperature rating to 300°F (148.9°C). Typical application includes air heating.
- High-temp ceramic rated to 2800°F (1537.8°C).
- Consult factory for other moisture seal options.
- ULTRAGARD with temperature rating to 700°F (375°C).

Mounting options include:

- Mounting brackets
- Locator washers
- Mounting collars
- Water-tight bulkheads

Maximum trim length is 237 inches (6020 mm). Heater designs with trim length greater than 120 inches (3048 mm) must be reviewed with factory.

Sheath materials: Incoloy®, 304 and 316 stainless steel, consult factory for other sheath material options.

Internal thermocouple options: Type K is used, consult factory for Type J thermocouple options.

U.S. Patent Pending

WATROD Heating Elements

Options

Moisture Resistant Seals

WATROD's MgO insulating material is hygroscopic. To prevent moisture contamination from entering the heater, an appropriate moisture seal must be used. Choosing the correct seal is important to the life and performance of the heater. Be sure

the maximum continuous use temperature is not exceeded at the seal location. Most end seals are applied with a small cavity in the end of the heater. The seal will also help prevent arcing at the terminal ends.

End Seal Options

End Seal	Code Number	Color	Seal Depth	UL® Recognition	Max. Cont. Use Temperature	Typical or General Usage/Application
Standard Epoxy	EC	Cream	3/16"	Yes	266°F (130°C)	General purpose for moisture resistance

Ceramic-to-Metal End Seal

Sheath Diameter	A	B	C	Thread Size
inch (mm)	inch (mm)	inch (mm)	inch (mm)	
0.260 (6.6)	1 11/16 (40)	1/2 (13)	1 1/32 (10)	#8-32
0.315 (8)	1 1/8 (43)	1/2 (13)	1 3/32 (10)	#10-32
0.430 (10.9)	2 1/8 (54)	1/2 (13)	2 1/32 (10)	#1/4-28

To order specify, **ceramic-to-metal end seal**.

Ceramic-to-metal end seals with threaded stud terminations provide an air-tight seal for continuous terminal temperatures up to 500°F

(260°C). Watlow does not recommend this seal if terminations are exposed to temperatures exceeding 500°F (260°C).

External Finishes

Belt Polishing

Belt polishing sands the oxidized sheath to a bright finish. This finish is available only on alloy sheath materials.

To order, specify **belt polishing**.

Bright Annealing

A process that produces a smooth, metallic finish. It is a special annealed finish created in a non-oxidizing atmosphere. This finish is popular in the pharmaceutical and food and beverage markets.

To order, specify **bright annealing**.

Passivation

During the manufacturing process, particles of iron or tool steel may become embedded in the stainless steel or alloy sheath. If not removed, these particles may corrode, produce rust spots and/or contaminate the process. For critical sheath applications, passivation will remove free iron from the sheath.

To order, specify **passivation**.

Tubular and Process Assemblies

WATROD Heating Elements

WATROD Terminations

Double-ended WATROD elements are available with a variety of terminations. Single-ended WATROD elements are available with only flexible lead wires.

The following table and illustrations detail the terminations available with double- or single-ended WATRODs—for each available sheath diameter.

Standard flexible lead wires are 12 inches (305 mm), Sil-A-Blend™ 390°F (200°C) unless otherwise

specified. Insulation options include TGGT (480°F/250°C) plus other temperature ratings. Consult factory for availability.

Overmolds are available for flexible lead wires only. Available in silicone rubber (390°F/200°C), neoprene (212°F/90°C) and other materials. Consult factory for details.

Tubular and Process Assemblies

WATROD Heating Elements

Double-Ended WATROD Bend Formations

Double-ended WATROD heating elements can be formed into spirals, compounds, multi-axis and multi-planes from 36 common bend configurations. Custom bending with tighter tolerances can be made to meet specific application needs.

Formation is limited by the minimum bend radius (R) and the straight length (F) required beyond the bend. In order to locate the end of a heated length within a bend, the radius must be three inches (76 mm) or larger. Additionally, overall length tolerance (T) must be included in one or more of the straight lengths.

Minimum radius for various sheath diameters and lengths are shown in the *Bend Formations* chart below. Illustrated on **pages 282 to 286** are the 36 common bend configurations available on both stock and made-to-order WATROD heating elements.

Single-Ended WATROD Bend Formations

Watlow does not recommend field bending single-ended WATROD elements. Formation is limited by the minimum radius of a bend (R)

and the straight length (F) beyond the bend. The radius must be three inches (75 mm) or more for the heated length's end to be inside a bend.

Additionally, the overall length tolerance (T) must be provided for in one or more of the specified lengths.

The four common bend configurations available for standard and made-to-order single-ended WATROD elements are Figures 1, 6, 22 and 28.

To order a common bend formation, specify the **bend figure number**, dimensions and critical tolerances.

WATROD Length Tolerance (T)			
Sheath Length		Length Tolerance	
inch	(mm)	inch	(mm)
11-50	(280-1270)	±1/8	(±3)
51-110	(1295-2795)	±3/16	(±5)
111-170	(2820-4320)	±1/4	(±6)
171-200	(4345-5080)	±3/8	(±10)
201 & up	(5105 & up)	±1/2	(±13)

WATROD Minimum Radius

0.625	(15.9)	1 1/2	(38)	3/4	(19)	1 1/2	(38)

Bend Formations

① R is the inside radius of a bend.

② F is the distance from the sheath's end to the start of the first bend.

Tubular and Process Assemblies

WATROD Heating Elements

Mounting Methods

Brackets

A 0.065 inch (1.7 mm) thick stainless steel bracket provides element mounting in non-pressurized applications. Attached to the heater sheath, these brackets are not suited for liquid-tight mountings. The bracket is located 1/2 inch (13 mm) from the sheath's end, unless otherwise specified.

To order, specify **mounting bracket**.

Single Leg Bracket

A 1 1/2 inch (38 mm) x 1 inch (25 mm) wide x 16 gauge stainless steel bracket with one element hole and one mounting hole 1/2 inch from end.

To order, specify **single leg bracket**.

Locator Washers

Stainless steel locator washers retain the heated area of the sheath

in the work zone, while allowing for expansion and contraction during cycling.

To order, specify **locator washer**, along with dimension from the heater's end.

Mounting Collars

Plated steel mounting collars secure the heater sheath with set screws to serve as adjustable stops for through-the-wall mounting. Collars are shipped in bulk.

To order, specify **mounting collars**.

Threaded Bulkheads

A threaded bushing with flange on the heater sheath provides rigid, leak-proof mounting through the walls of tanks. A gasket, plated steel washer and hex nut are included. The threaded end of the bushing is flush with the sheath's end unless otherwise specified. Threaded bulkheads are available in brass, steel or stainless steel as indicated in the table.

To order, specify **threaded bulkheads** and the specifications from the table.

Threaded Bulkhead Specifications

Element Diameter inch (mm)	Material	Thread Size	A ^① Flange Size/Style inch (mm)	B Threaded Length inch (mm)	C Overall Length inch (mm)

① Designates the dimension across flats for hex flange style and outside diameter for round flange style.

② Equal to "B" Dimension unless otherwise specified.

Tubular and Process Assemblies

WATROD Heating Elements

Tubular PLUS Program

Watlow's Tubular PLUS Program is an innovative stocking program that allows formed tubular heaters to be shipped in three to six days, instead of the four to six weeks it takes most manufacturers.

The Tubular PLUS Program allows customers to order the desired heated length, cold length, diameter, heater wattage, voltage, formation and termination option.

By utilizing stocked 0.315 inch or 0.430 inch diameter Incoloy® elements, an appropriate heater is selected from stock and modified to fit the physical description of the required heater. The heater is annealed to remove moisture and enable bending and then formed to the desired configuration. In most cases the only variation will be a slight difference in the heater wattage.

Because Watlow will now stock additional tubular elements, the Tubular PLUS Program reduces downtime, lowers inventories and increases overall customer value.

Features and Benefits

- **Availability of 0.315 inch and 0.430 inch diameters;** most commonly requested for formed tubular heaters.
- **Cold ends from one inch to 18 inches** provide increased capabilities for short and long cold ends.

- **Minimum heated lengths to four inches** provide shorter heated lengths than currently available using conventional tubulars.
- **Incoloy® 800 sheath material** provides the highest quality sheath material for immersion and air applications.

PLUS One

- **Quick delivery: three to six days vs. four to six weeks** results in reduced downtime, lower inventories and increased overall customer value.

PLUS Two

- **Precise location of cold ends and heated lengths** assists in applying heater and in proper bending, allows uniform heating in platens and puts the heat within the application.

PLUS Three

- **Longer element lengths** allows use of one element to replace multiple elements and reduces terminations.

Applications

- Plastics-Hot runner molds
- Packaging-Seal bars
- Semiconductor-CVD, PVD
- Cast-in heater platens

Options

- Maximum heated length: 118 inches, up to 18 inches cold length on each side.
- All standard WATROD options are available.
- Selection of formation numbers 1, 3, 6, 7, 8, 11, 15, 16, 17, 18, 21, 22, 23, 25, 26, 30 and 31 (**pages 282-286**) offer quick delivery. Special formations will increase delivery times. Please consult factory for details.
- To determine if program is applicable to your needs, please contact your local Watlow sales representative.

All heating elements are Stock unless otherwise noted.

Availability

Stock: Same day shipment

Standard: Straight length, three weeks; formed with options, four weeks

[Ⓜ] Stocked unannealed. Allow one day for annealing. Specify **DO NOT ANNEAL** if annealed WATROD not required.

Truck Shipment only

Tubular and Process Assemblies

WATROD Heating Elements

Single-Ended WATROD Application Hints

The single-ended WATROD heater's construction limits its usefulness in some applications. The following are some guides to follow when considering a single-ended WATROD.

- When single-ended termination simplifies application wiring.
- Your application requires lower wattage or a smaller package.
- Do not locate the end of the heated length within a bend, unless the radius is three inches (75 mm) or more. Field bending is not recommended.
- Bending is limited to bend Figures 1, 6, 22 and 28 (see pages 282 to 286 for details).
- Ensure termination temperatures do not exceed 390°F (200°C) or the seal's maximum rating.
- Keep terminations clean, dry and tight.

Single-Ended WATROD

WATROD Description	Sheath A Dimension		Heated B Dimension		Watts	Code Number		Est. Net Weight	
	inch	(mm)	inch	(mm)		120V~(ac)	240V~(ac)	lbs	(kg)

Applications: Platen and Forced Air Heating, and Deicing

20 W/in²	15	(381)	11 ½	(292)	270	RSN151W	RSN1510W	0.3	(0.2)
0.375" Dia.	20	(508)	16 ½	(419)	390	RSN201W	RSN2010W	0.4	(0.2)
Incoloy®	25	(635)	21 ½	(546)	500	RSN251W	RSN2510W	0.5	(0.3)
(3.1 W/cm ²)	30	(762)	26 ½	(673)	625	RSN301W	RSN3010W	0.6	(0.3)
(9.5 mm)	35	(889)	31 ½	(800)	750	RSN351W	RSN3510W	0.7	(0.4)
	40	(1016)	36 ½	(927)	860	RSN401W	RSN4010W	0.8	(0.4)

All heating elements are Standard units.

Availability

Standard: Shipment within six weeks

F.O.B.: Hannibal, Missouri

How to Order

Single or Double-Ended WATROD

To order a stock, standard or assembly stock WATROD element, specify:

- Watlow code number
- Volts/watts
- Termination options
- Options
- Quantity

If stock WATROD heaters do not meet your application needs, Watlow can provide a made-to-order unit. Please specify:

- Description of application, including heated material, operating temperature and flow rate, etc.
- Volts/watts
- Sheath material/diameter
- Sheath length

- Single or double-ended
- Heated length
- No-heat length at each end
- Terminal pin length or termination options
- Moisture seal type
- Bend configuration, dimensions and critical tolerances (send drawing, if available)
- Options, including external finish and mounting method
- Quantity

Availability

Double-Ended WATROD

Straight Length Element

Stock: Same day shipment

Modified Stock[Ⓢ]: Three to five working days

Standard: 10 working days

Made-to-Order: Three weeks

Formed Element

Modified Stock[Ⓢ]: Five to seven working days

Standard: Three weeks

Made-to-Order: Four to five weeks

Single-Ended WATROD

Straight Length Element

Modified Stock[Ⓢ]: Three weeks

Standard: Three weeks

Made-to-Order: Three weeks

Formed Element

Modified Stock[Ⓢ]: Three weeks

Standard: Three weeks

Made-to-Order: Four to five weeks

Options, complexity and quantity may affect availability and lead times. Consult factory.

Tubular and Process Assemblies

WATROD Heating Elements

Enclosure Heaters

Designed to prevent freezing and condensation in electrical and mechanical housings, the WATROD element is enclosed in a perforated, aluminized-steel bracket.

Performance Capabilities

- Watt densities to 15 W/in² (2.3 W/cm²)
- Wattages to 1000 watts
- UL® and CSA component recognition to 250V~(ac)

Features and Benefits

- **Stainless steel sheath wall** further resists corrosion and protects the heating coil from exposure.

- **Silicone resin seal** provides protection against humid storage conditions and is effective to 390°F (200°C).
- **Perforated aluminized-steel mounting bracket** eases installation and helps prevent direct contact with the heating element.
- **Stock straight projection Type B #10-32 screw lug terminals** provide easy electrical connection.
- **Made-to-Order threaded stud**, quick connect and flexible lead wire termination options. See **page 281** for details.

Applications

- Control panels
- Traffic signal boxes
- Automatic teller machines
- Switch gear
- Electronic equipment

Application Hints

- Locate heater(s) in the lowest portion of the enclosure to maximize convection heating.
- Place thermostat(s) in the upper half of the enclosure, away from the heater(s).

Watts	Watt Density		Code No.		Availability	Est. Net Weight

How to Order

To order a stock WATROD enclosure heater, please specify:

- Watlow code number
- Volts/watts
- Termination options
- Options
- Quantity

If our stock units do not meet your application, Watlow can provide

made-to-order enclosure heaters. Please specify:

- Volts/watts
- Sheath diameter/material
- No-heat section
- A, C, H, L and R dimensions per Figure 8 bend formation shown on catalog **page 283**.
- Termination options
- Options
- Quantity

Availability

Stock: Same day shipment

Modified StockⓄ: Three to five working days

Made-to-Order: Four to five weeks

Options, complexity and quantity may affect availability and lead times. Consult factory.

WATROD Heating Elements

Plastics Application

Hot Runner Mold (Manifold) Features and Benefits

- **Precise conformity to customer specifications** ensures easy installation—bending tolerances as low as ± 0.002 inch.
- **Common element diameters** include: 0.260, 0.315, 0.335, 0.375 and 0.430 inch (6.6, 8, 8.5, 9.5 and 10.9 mm).
- **Incoloy® sheath material** for high temperatures, 304 stainless steel for smaller radius bends.
- **Superior resistance coil design** produces even heating.
- **Threaded stud or leadwire termination** as required.

Use the *Milled Groove Sheath Watt Density and Groove Fit* chart to find the recommended watt density or tightest groove fit. Optimum groove fit, without heat transfer cement, can be determined by plotting the intersect point between the required sheath watt density and the Delta temperature (T). If the Delta T is not known, simply subtract the mold temperature from the maximum 1000°F (540°C) sheath temperature. Any combination of watt density and groove fit which results in a Delta T below the recommended maximum will maximize heater life. Conversely, if the Delta T is greater, less heater life can be expected.

- Recommended maximum watt density = 40 to 70 W/in² (6.2 to 10.9 W/cm²)
- Recommended groove = 0.065 inch (1.65 mm) larger in diameter than sheath diameter, and use heat transfer cement.
- Recommended heater sheath diameter = 0.315 inch (8 mm)
- Recommended maximum Delta T = 400°F (205°C)
- Maximum sheath temperature = 1000°F (540°C)
- Recommended sheath material = Incoloy®

How to Order

All milled groove heaters are made-to-order. Due to precision forming requirements, please provide a detailed drawing or CAD disk. Consult your Watlow representative for price and shipment details. To help the ordering process, provide the following information:

- Operating temperature
- Volts/watts
- Sheath diameter and material
- No-heat section
- Electrical terminations
- Bend configurations and dimensions
- Groove cross section dimensions
- Quantity

Replacement Heaters

To order a replacement for an existing milled groove heater, specify original Watlow code

number, or provide dimensions of the competitive heater, or the groove dimensions from the manifold.

Heat Transfer Cement (HTC)

Heat transfer cement can maximize heater performance and life by increasing thermal conductivity between the sheath and manifold. The maximum exposure temperature is 1250°F (675°C). Available in one quart cans. To order, specify **code number 148-15-2-1**.

Caution

Heat transfer cement conducts electricity. Avoid contact with terminations, wiring and other sources of electric current.

Tubular and Process Assemblies

WATROD Heating Elements

Semiconductor Application

Sheath temperatures can vary up to a maximum sheath temperature of 1832°F (1000°C), with maximum watt densities up to 60 W/in². Individual element and assembly specifications vary depending on the application. Contact factory for E-beam welding, vacuum brazing and special plating.

Features and Benefits

- Operating temperatures to 1832°F (1000°C)
- Electrical isolation to a minimum of 10 teraohms, high isolation resistance heater only
- Vacuum compatibility to 10⁻⁹ Torr
- Nitrogen purge vacuum packaging
- Milled groove patterning to 0.25 inch (6.35 mm) radius
- Materials: stainless steel, Incoloy®, Inconel®, aluminum, nickel, copper

- Heated part assemblies: hot plates, vacuum fittings, special formed heaters
- Round elements from 0.210 to 0.475 inch (5.3 to 12.1 mm) diameter
- FIREBAR heating elements from 0.625 to 1.00 inch (15.9 to 25.4 mm) wide
- X-Ray capabilities and testing certification for ensured reliability.

Applications

- CVD
- PVD
- Etch
- Photolithography
- Annealing
- Wafer probers
- Flat panel display

External Finishes

- Black oxide
- Bright anneal
- Glass bead
- Belt polish
- Electropolish

ULTRAGARD Seal

A high temperature hermetic seal to 700°F (350°C).

For special plating, consult the factory.
